

BOOKSHELF LOUDSPEAKERS

Floorstanding performance in a bookshelf design

Klipsch engineers have captured all the thrills and intensity of floorstanding speakers in two attractive bookshelf models. The RB-5 and RB-3 are warm, intimate speakers that combine compact size with sound that's detailed and powerful enough to earn the Reference Series name.

The 96dB RB-5 employs the same driver technology as our RF-3 floorstanding speaker - a 1" titanium

diaphragm compression driver with a 6" square Tractrix® Horn and a single 8" Cerametallic™ woofer with a large magnet. Our RB-3, with 94dB sensitivity, uses the same titanium diaphragm compression driver with a 5" square Tractrix® Horn. Attention-getting low-end performance comes through a 6.5" Cerametallic™ woofer.

Both offer the same features as our larger Reference Series loudspeakers,

including internal wiring with custom Monster Cable® Z-Series, audiophile-grade crossover components, and solid construction using rich wood veneers. These bookshelf models use cast-polymer woofer frames with high impact tolerance that protect the woofer's internal parts and ensure their critical alignment. A large flared port increases efficiency and bass response, allowing greater output with less turbulence and distortion.
